

BIO-GLASS® DELIGHTS IN BELLEVUE

Western Tile & Marble with locations in Las Vegas and Bellevue (the beautiful Seattle suburb and home of Microsoft Founder Bill Gates), WA recently added Bio-Glass to their custom cabinetry showroom adjacent to Western's Bellevue stone showroom. Bio-Glass in "Fossil Amber" is featured in the "Northwest Contemporary" display - one of the 5 kitchen vignettes that are part of the updated showroom. The goal was for a contemporary look - but not harsh.

Bio-Glass gives their modern, square, straight-lined kitchen an earthy feel that makes it perfect for the Northwest home-owner. "Of all 5 of our kitchen displays, this display is without a doubt the most popular. The green aspect is a definite draw as our clients very much like to have this option.", notes Erika Litsjo, Western Tile & Marble's Marketing Manager. Litsjo adds that she wanted something green, aesthetically pleasing, and unique to showcase in their eye-catching window display facing the main street. "We are 100% happy with the outcome!", adds Litsjo.

ECO-CEM® GIVES REASON TO SMILE AT PHILLY DENTAL OFFICE

Architect Antonio Sofan collaborated with longtime friend dentist Alfonso Patron on an interior design based on color therapy for Patron's Philadelphia dental office, specializing in periodontics and implant surgery. The dental office exposes the therapeutic benefits of color as well as provides a positive distraction for patients. While each of the 4 patient rooms was assigned a specific color that helps endorse vitality and generate a forceful impact on the patient's health and state of mind, the waiting area's walls are covered with Eco-Cem panels in "Windsor Grey" allowing the vibrant paintings and prints in the reception to pop. Accompanying Eco-Cem in the waiting area are overlapping strips of dove-gray felt wrap and an energizing sunny yellow open office where the patient visits for admissions and checkout.

"Everybody who comes to my office loves the office, the Eco-Cem panels, and the colors. I love the contrast between the gray and the yellow in the background of the reception area.", notes Dr Patron.
